

Muhammad Nabeed Haider

Computer Science Undergraduate

Islamabad, Pakistan

nabeedtouseeq@gmail.com | github.com/m-nabeed-haider |
linkedin.com/in/muhammad-nabeed-haider-92a371240

PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on experience developing Python applications, backend services, and AI-powered software. Built projects using Python, FastAPI, LangGraph, SQL, and modern development tools while following modular software design principles. Seeking a Junior Python Developer role to build reliable software and continue growing as a backend engineer.

EDUCATION

Bachelor of Science in Computer Science

2026

FAST National University of Computer and Emerging Sciences, Islamabad

- CGPA: 3.56 / 4.00
- Relevant Coursework: Generative AI, Machine Learning, MLOps, Natural Language Processing, Statistical Modelling, Cloud Computing, Information Security

EXPERIENCE

AI Lab Demonstrator

Spring 2026

FAST National University of Computer and Emerging Sciences

- Conducted weekly Artificial Intelligence laboratory sessions for approximately 50 undergraduate students.
- Provided guidance on Python programming, search algorithms, machine learning fundamentals, and debugging techniques.
- Assisted with grading programming assignments, evaluating lab performance, and supporting students during practical sessions.
- Collaborated with the course instructor to maintain a consistent and engaging laboratory environment.

PROJECTS

GymBuddy

2026

Python • FastAPI • Ollama • RAG

- Developed backend REST APIs for an AI-powered fitness assistant using FastAPI.
- Integrated locally hosted Ollama language models to provide context-aware fitness recommendations.
- Implemented a Retrieval-Augmented Generation (RAG) workflow to improve response relevance using external knowledge.
- Collaborated within a team to design, test, and demonstrate backend functionality through a lightweight web interface.

SCAR — AI Consulting Platform

2026

Python, FastAPI, LangGraph, Ollama

- Architecting a modular AI consulting platform using FastAPI and LangGraph to support extensible multi-agent workflows.
- Integrating local large language models through Ollama to enable private and offline AI inference.
- Designing reusable software modules with emphasis on maintainability, scalability, and clean architec-

ture.

- Applying Git-based development practices with modular project organization for collaborative development.

Production MLOps Pipeline

2026

Docker, FastAPI, Prometheus, Grafana

- Built a containerized machine learning inference service using FastAPI and Docker.
- Integrated Prometheus metrics and Grafana dashboards for application monitoring and observability.
- Configured automated development workflows using GitHub Actions and version control best practices.
- Focused on reproducible deployment, modular project structure, and production-oriented software practices.

FakeLess — Audio Deepfake Prevention

2026

Python, PyTorch, SpeechBrain

- Built an audio protection pipeline to reduce the effectiveness of neural voice cloning models while preserving speech quality.
- Trained deep learning models using PyTorch with SpeechBrain-based speaker embeddings for identity-aware optimization.
- Processed and evaluated large-scale speech datasets using automated preprocessing and feature extraction pipelines.
- Measured model performance using objective speech-quality and speaker-similarity metrics throughout experimentation.

TECHNICAL SKILLS

Languages: Python, Java, SQL, C/C++

Backend: FastAPI, REST APIs

Databases: SQLite, MongoDB, PostgreSQL

Tools: Git, GitHub, Docker, Linux, VS Code

Concepts: Object-Oriented Programming, Data Structures, Algorithms, Software Engineering

ACHIEVEMENTS

- AI Lab Demonstrator for the Artificial Intelligence course at FAST-NUCES.
- Developed multiple end-to-end AI and machine learning projects spanning Generative AI, MLOps, and backend systems.
- Hands-on experience with production-oriented machine learning workflows, CI/CD, Docker, monitoring, and LLM-based applications.
